

GLASPRAY

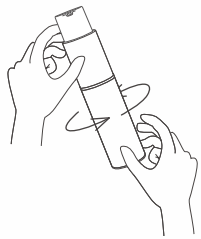

Twist Up Airless
Sustainable package

Glaspray's product development strategies focus on reusability and follows basic 3R principle of Reuse, Reduce and Recycle. As a result, we have created a true sustainable packaging for skincare and cosmetics.

Our AIRLESS cartridge refill system, TUA (Twist Up Airless) is a patented system that carries balance between glamour and sustainability. The airless cartridge replacement system means less impact on the environment as the packages can be reused thus reducing waste.

There are many new policies from the industry or brands being implemented on sustainable packaging, and are likely to change with time as we learn all the possibilities. As an innovator in refillable packages, Glaspray's goal is to provide solutions to our partners to achieve their guidelines and standards of sustainability towards a true circular economy.
